

MEGA MED

MEDICAL EQUIPMENT LLC

A GLOBAL PRESENCE IN HEALTH CARE

MEGA MED MEDICAL EQUIPMENT L.L.C

A GLOBAL PRESENCE IN HEALTH CARE

Based in Dubai, United Arab Emirates, and actively involved in the business of supplying Laboratory, Medical and Surgical equipment, Pharmaceutical products and Disposables. Mega Med has a strong client base both in the Government and Private Health Care sector. Over the years we have progressively gained the attention and confidence of the main suppliers that seriously take great care in the sales and services. Our goal is to expand Mega med to strategic and effective distributors to work with highly innovative products that meet the highest standards of quality which we were successful in the past. Thereby become the medical equipment provider of all of the Middle East.

X-RAY MACHINE CONVENTIONAL

The GXR-SD Series is a diagnostic digital radiography system providing reliable high quality digital radiography images with reduced dose. The GXR-SD DR systems provides comprehensive digital solutions to all radiography needs, featuring GXR-SD digital imaging system with stationary or portable digital flat-panel detectors, user-friendly designed various tube stands, patient table and wall stand are offered for user's choice.

X-RAY MACHINE PORTABLE

Allengers MARS 3.5KW Mobile X-Ray machines are based on HF X-Ray generation technology. These machines are most suitable for applications where ease of mobility is required in trauma cases and bedside X Rays in hospital wards ICUs and can be taken through elevators with ease. The HF X-Ray generation technology used in these models offers the following advantages over the conventional 2 pulse technology. Elimination of motion artifacts due to lower exposure time (excellent film quality).

CT SCAN

Anke Anatom 32 Fit Multi-Slice Spiral CT Scan gives a possibility to perform computed tomography without any problems and on high quality level. This device is used to conduct exams of internal organs and their functioning. With its help, a physician has a possibility to assess the condition of the human body as a whole. Obtained images are of high definition, High-definition 3D images of the area under study, the diagnostics does not take a lot of time, Acceptable radiation dose are key features

CARM

Allengers high frequency C Arms are incorporated using the latest state-of-the-art "High Frequency Technology", in which there is minimal production of non-useful/harmful X-Rays. Back-up circuitry for enhanced performance and reliability, Feature touch control panel for ease of operation and disinfection, Automatic Brightness Stabilizer (ABS), Full compatibility with ESWL.
